ABSTRACT

NURHAYATI. 302 13 11 073. The Influence of Export, Import and Inflation on Gross Regional Domestic Product in Bangka Belitung Province Island in 2018-2015.

Economy is an important element in prosperity of the population. Good economy and growth give an important contribution to the people that will have positive impact on the increasing of people income. It means, if the economic grows, more opportunities for people to earn income through their participation in economic activities. Generally, regional economic condition can be indicated by numbers of gross regional domestic product (PDRB), which describes gross added value/final output value which resulted through production of goods and services by unit of production in an area in certain period. The purpose of this research is to determine the description of export, import, inflation and gross regional domestic product in Bangka Belitung Province Islands, and also to know and to analyze the influence of export, import, and inflation on gross regional domestic product either partially or simultaneously. This is descriptive quantitative research. Total sample of this research was 32 samples. The type of data was secondary data. The data analyzing technique used multiple linear regressions test. The result of research indicates that (1) export (X_1) is obtained $t_{\text{value}} 3.871 > t_{\text{table}} 2.045$, then partially has positive and significant influence on Gross Regional Domestic Product; (2) import (X_2) is obtained $t_{\text{value}} 0.199 < t_{\text{table}} 2.045$, then partially has positive and not significant influence on Gross Regional Domestic Product; (3) inflation (X_3) is obtained $t_{\text{value}} -0.221 < t_{\text{table}} 2.045$, then partially has negative and significant influence on Gross Regional Domestic Product; (4) the result of F test indicates the value of F_{value} is $7.197 > F_{\text{table}} 2.950$, while the significance is $0.001 < \alpha$ on the significance level of 0.05, so H_0 is denied and H_a is accepted which means independent variables (export, import, and inflation) simultaneously influence dependent variable (gross regional domestic product) significantly.

Keywords: export, import, inflation, and gross regional domestic product
