Title and Abstract

Title: Ectoparasite Prevalences of Grouper Fish (*Epinephelus fuscogutatus* x *Epinephelus polyphkadion*) Cultured in Floating Net Cages
Abstract: *Monitoring the health of the reared fish in a floating net cage (FNC) is often conducted by examining their ectoparasites. This study determines ectoparasite prevalences of grouper fish (Epinephelus fuscogutatus x E. polyphkadion). It was conducted in the waters surrounding Pongok Island, South Bangka Regency. The health examination of both fish and ectoparasites was carried out by applying simple random sampling during three periods: November 2016 (I), February 2017 (II) and May 2017 (III). Hydro-ocanography survey was done every month during the*
