Dear Dr. Endang Bidayani,

The authors did not improve the manuscript, as requested: "the scientific methodology and content of the article need to be substantially improved: the hypothesis formulation, the data collection methodology (which cannot be evaluated, in absence of information), the results presentation, the statistics on the data and hypothesis validation, etc. The argumentation is incomplete and it lacks of coherence. As it is, the manuscript is not publishable and a major revision is required for improving it according to the scientific standards"

Please take into consideration and implement the requirements, as it is, the manuscript is not publishable, it all depends on the authors when the manuscript could be published. All changes must be highlighted with yellow.

Thank you.
